1. ISED于十月份TCB workshop提出，关于多型号或版本申请新要求。

多型号或多产品版本申请ISED认证时，要求每个申请的型号和产品版本都必须提供产品的内外部照片。

## Family Certification Guidelines (2/10)

### Exhibits required for family certification (or when adding models via Permissive Change)

- ISED has been lenient in the past with submission of some exhibits
  - Family certification rarely includes more than one set of internal & external photos
  - RSP-100 Form C is however quite clear on this: **Internal and External photos of the product versions in the application are required**
  - This requirement is not just for one product version. It applies to all product versions in a family

RSP-100, Form C – Document checklist for certification

Document checklist for certification	
Description of required document(s)	Type of service
RSS-102 Compliance: S&B Test Report and/or RF Evaluation and/or Nerve Stimulation Test Report for the product.	All*
Photos: Internal and External photos of the product versions in the application.	All*
Product manual with applicable user notifications and operational description.	All*

- ISED is now requesting to see internal and external photos of all models / product versions in a family
  - This is applicable whether or not an applicant is stating that all models are identical
  - This is applicable for all new family certifications or addition of models via Permissive Change application
  - Applications received by ISED which do not include a set of internal & external photos for each model / product versions, will be sent back to the CB.

2. FCC草案KDB 996369模块认证指南评议期延长至2023年1月2日。

Below please find the most recent KDB activity by the FCC. These materials are for your reference and comment as indicated in the notice:

The Comment Period for the Draft KDB 996369 Module Certification Guide has been extended by a month to end on January 2, 2023.

Date Posted: Oct 25 2022 12:00AM

Last Date to Post Comments: 01/02/2023

### 3. TCBC Workshop KDB sharing Q&A.

**Question 1:** Various KDB Publications, e.g. 896810) D01, 896810) D02, etc., clearly indicate that the use of the FCC logo on the label of a device authorized under SDoC is optional. Is it permissible for a device solely authorized under certification to also use the FCC logo on their product label? This would be in addition to the ID number and all other label information required by the Rules, and not intended to replace any of that.

**Answer 1:** It is not permissible for a device solely authorized under certification to also use the FCC logo. The logo can only be optionally used [when] the SDoC procedure was used for an equipment authorization and the responsible party complies to all the required rules for SDoC including 2.1077.

**Question 2:** For cases where an unlicensed device is certified and EIRP is listed on the grant (such as UNII 5.9/6 GHz rules), we have a manufacture that asked us to confirm if the following would be allowed under a C2PC.

Is it allowed to do a C2PC if a lower gain antenna is used and then RF conducted [power] is increased to make the EIRP higher but still less than the originally approved EIRP level listed on the original grant?

**Answer 2:** Yes, that is acceptable. Since the conducted power has increased all testing will need to be repeated.

### 4. UKCA符合性标识强制执行日期延期至2024年12月31日。

On November 14, 2022, the UK announced that the mandatory use of the UKCA mark (for Great Britain) is being delayed for two more years. The CE mark will continue to be accepted for most products being placed on the market in Great Britain until December 31, 2024. This also applies to products that fall under the UK Radio Equipment Regulations (RER) and the UK EMC Regulations (EMCR).

UK's BEIS is hosting two webinars (6:00 am EST and 10:00 am EST) on Monday, November 21, 2022. Registration is required – see links below:
